

# Martin New Master Trumpets

1929 - 1932

The first mention of the Master trumpet was February 1929.

The "Supra-Metal" bell was made from nickel silver.

New . . . Fundamentally, basically New are the Master Martin Trumpet and Trombone. Bells of the hardest material ever used in the construction of musical instruments make possible a degree of temper never before attained. The result,—a tone quality so superior that every experienced player will recognize the greatness of these Master Martins the minute he tries them. Not a mere jingle, but a meaningful phrase is our invitation to musicians to "Tap the bell and hear it ring; Blow the horn and hear it sing."

If there really is a better Trumpet or Trombone on the market, you naturally want to know about it. Your Martin Dealer will gladly show you the new Master Martins and your own judgment will quickly tell you, whether or not they are really better. If, by any chance, there is no Martin Dealer near you, drop a post card to the factory for trial arrangement.

The New Master #95425 c.1929 (below & top right).

#99000 c.1930

#99038 c.1930 (below & right)

This one was said to have a 0.453" bore.

#99235 c.1930, 0.438" "M" bore (courtesy Centex Brass)

#99236 c.1930 with beautiful gold engraving.

#104xxx is the highest Master example I have recorded.

A nice model introduced at the wrong time.

These are the first Martin trumpets to come with 3rd slide tuning.
